Full-Stack Developer | AI & Machine Learning Engineer

Professional Summary

Full-stack developer and Artificial Intelligence graduate with hands-on experience building production-style web applications, REST APIs, secure authentication, database-backed workflows, real-time communication, and AI-enabled systems. Strong practical stack includes React, Next.js, TypeScript, Node.js, Express.js, NestJS, MongoDB, SQL, Socket.IO, Tailwind CSS, Docker, Postman, and Python AI service integration.

Education

Bachelor's Degree - Computers and Data Science, Artificial Intelligence Department

Alexandria University, Faculty of Computers and Data Science | Intelligent Systems Department | Graduated 2026

Full-Stack Skills

- Frontend: React, Next.js, JavaScript, TypeScript
- UI: HTML, CSS, Tailwind CSS, responsive design
- State/UX: hooks, providers, protected routes, forms
- Backend: Node.js, Express.js, NestJS, REST APIs
- Realtime: Socket.IO, WebSockets, streamed chat UI
- Databases: MongoDB, Mongoose, MySQL, SQL
- Security: JWT, RBAC, bcrypt, OTP flows
- Data contracts: DTO validation, response normalization
- Performance: aggregation pipelines, indexes, caching
- Tools: GitHub, Docker, Postman, Figma, Vercel
- Testing/QA: lint/build validation, API testing
- AI integration: Python services, RAG chatbot APIs

Graduation Project - Detailed Full-Stack Profile

Mind Guard - AI-Powered Mental Health Monitoring Ecosystem

Project: Team graduation project, Alexandria University, 2025-2026 | Supervised by Prof. Dr. Mervat Mikhail

Stack: Next.js 16, TypeScript, Tailwind CSS, NestJS, Node.js, MongoDB, Mongoose, Socket.IO, JWT, bcrypt, CryptoJS, Flutter, Python AI services

- Contributed to a multi-platform healthtech ecosystem connecting patient and doctor web workflows, Flutter mobile flows, secure NestJS backend services, MongoDB persistence, real-time alerts, and AI intelligence services.
- Built the browser product around role-based patient and doctor experiences: onboarding, authentication, dashboards, analytics, mood check-ins, NEURA chatbot entry, wellness tools, doctor recommendations, appointment booking, patient review, risk monitoring, and session management.
- Structured the web frontend with Next.js App Router, thin route files, reusable view components, shared Button/Card/Icon/Modal primitives, protected route handling, responsive layouts, and a light/dark theme system powered by CSS variables.
- Integrated frontend services with the backend through stable /api and /socket.io rewrites, reducing CORS/port instability and keeping the UI resilient when backend targets change between local and deployed environments.
- Normalized backend variability across authentication tokens, patient records, doctor records, slot data, mood readings, and response envelopes so the UI could consume stable models even while APIs evolved during integration.
- Implemented a real-time chatbot interface with conversation history, full-height patient chat route, Socket.IO streamed response chunks, active message merging, reconnection states, local fallback mode, and pending-message replay.
- Worked with a backend architecture built around modular NestJS modules for auth, users, HRV records, mental health analysis, doctor interactions, chatbot sessions, notifications, OTPs, and audit logs.
- Applied HR-grade engineering themes: JWT authentication, NestJS Guards for RBAC, DTO validation, bcrypt password hashing, AES-256 field-level encryption for sensitive fields, OTP TTL indexes, rate limiting, structured errors, and audit logging.
- Documented and supported performance hardening patterns including MongoDB aggregation pipelines, selective projections, lean queries, compound indexes, cursor pagination, in-process caching, gzip compression, health checks, and graceful shutdown handling.

Selected Full-Stack Projects

Event Management System (EventX Studio)

React, Vite, Node.js, Express.js, MongoDB, Tailwind CSS, JWT

- Built a full-stack event management platform with admin/user roles, JWT authentication, event CRUD operations, booking workflows, ticket type configuration, seat selection, QR code generation, and dashboard insights.
- Delivered a responsive React and Tailwind interface with dark/light theme support and interactive frontend components.

Exclusive E-Commerce Platform

Next.js, TypeScript, Tailwind CSS, Node.js, Express.js, MongoDB, JWT

- Built a full-stack e-commerce platform with secure authentication, product catalog, category browsing, shopping cart, wishlist, order management, and responsive user experience.
- Implemented RESTful APIs, JWT-based authentication, MongoDB data modeling, and reusable frontend components with Next.js and Tailwind CSS for scalable, maintainable development.

Saraha App - Backend API

Node.js, Express.js, RESTful APIs, routing, middleware, validation, Postman

- Designed RESTful APIs for anonymous message exchange with structured routes, middleware, validation, centralized error handling, and clear request/response behavior.

Movies API Website

React, JavaScript, API integration, Axios/Fetch, reusable components

- Built a responsive movie discovery app with live API data, search, filtering, sorting, React hooks, reusable UI, and clean browsing flows.

AI & Robotics Exposure

Mind Guard AI integration, NEURA RAG chatbot, HRV/PPG stress-classification concepts, Biped Robot Control System, DUM-E Robotic Arm, VisionDeck computer-vision suite, KBAI Book Chatbot, Connect 4 AI, search/optimization projects, and Machine Translation: English-Spanish.

Courses

Courses: Full-Stack Web Development - Route Academy; Machine Learning; Natural Language Processing; Pattern Recognition; Databases; Cloud Computing; Operations Research; Embedded Systems; Internet of Things; Modern Control Systems.

Languages

Languages: Arabic - Native | English - Good working proficiency
